## Micro-Vickers Hardness Testing Machines

The HM-100 Micro-Vickers hardness testing machine is a new series in Mitutoyo hardness testers. To expand the measurement application range, a new designed indenter/object turret and control unit are employed. The new turret has three objective mounts. By adopting the calibration function, all of three objectives can be used for the indentation measurement. For easy setup of Knoop hardness measurement, the turret also has an additional mount for a Knoop indenter. The new separate control unit has two choice of display type. The LED type employs a durable sheet switch for hard workshop environment. The other LCD type employs a touch screen function. All of operations including statistical data processing, data conversion to other hardness scale and condition setting for OK/± NG tolerance judgment can be performed by a simple touch of screen.

## FEATURES

### Machine proper

- A wide range of test force from  $4.903 \times 10^{-3} N$  to  $19.61 N^*$  is available for measuring a various type of specimens.

The load duration can be set in 1sec increments between 5 and 99sec\*\*

The minimum reading of indentation is  $0.01 \mu m^{***}$ . It allows small indentations to be measured with high precision.

\*HM-124/125/System 8

\*\*60sec: HM-102/103

HM-101 (5sec increments)

\*\*\* $0.1 \mu m$ : HM-102/103,  $0.2 \mu m$ : HM-101

Indentation on a structural material

- Up to three\* objectives can be installed on the turret mount (except for HM-101). The calibration function allows all of objectives installed to be used for the measurement. This expands the measurement application. The magnification can be switched according to the indentation result.

\*two: HM-102/103

- In addition to the standard Vickers indenter, an optional Knoop indenter can be installed at the next mount on the turret\*. A simple turn of the turret makes the HM-100 of a Knoop hardness testing machine.

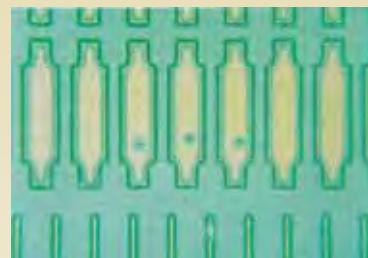

\*except for HM-101, HM-102/103

- The power turret\* can switch indenter/objective position by a single touch of LCD screen.

\*HM-122/123/System 6,  
HM-124/125/System 8

- The indenter/objective turret provides a high positioning accuracy and repeatability. This allows the HM-100 to indent a target place set through the objective exactly. A hardness in minute area like crystal grain boundary and deposit of metal material can be measured simply and accurately.

Pattern of PCB

### CCD video monitor system\*

- Indentation measurement on the 9-inch monitor reduces operator's eye fatigue and therefore operator error.
- Flicker-free images on the video monitor due to the use of the vibration-resistance and shock-resistance CCD camera.
- With the optional video printer connected, video images can be printed out easily.
